# Financial Distress Calculator

We have seen far too often people miss judge targeted returns based on their lifestyle and holdings. We designed the Chapwood financial distress calculator in a way that simplifies the analysis process. You need to go through three easy steps to determine if you have enough money to retire or how much return you need to make to not lose purchasing power. Loss of purchasing power is just as deadly as lost principal, and most people fail to plan for the accurate percentage of asset depreciation.

No other financial calculator solves the rate of return you need to make, not to lose purchasing power while factoring in your expenses and taxes. This tool will tell you if you were on the road to a safe retirement or if you're on a path to go bankrupt. We created this tool to allow you to anonymously determine what you have is what you need.

You want your end balance to continue to grow while you withdraw money

This precisely pinpoints when you retire and how long you can live in the same manner as you did when you first retired.
